

PRESS RELEASE: **FOR IMMEDIATE DISTRIBUTION**

Authentix Named Exclusive Technology Provider in New Five-Year contract to Provide Advanced Fuel Marking Solution in Bosnia and Herzegovina

ADDISON, Texas, July 21, 2026 - Authentix, a global leader in government authentication programs, today announced that it has executed a five-year contract as part of a local consortium led by Inspekt RGH Sarajevo and will serve as the exclusive provider of the fuel marking technology for the Government of Bosnia and Herzegovina's newly established national fuel marking program.

The establishment of the fuel marking program is provided for under the *Rulebook on the System of Mandatory Marking of Liquid Petroleum Fuels*, recently adopted by the Council of Ministers of Bosnia and Herzegovina. The program is designed to combat the grey economy and illicit fuel trade, prevent the misuse and adulteration of petroleum products, protect consumers from low-quality fuel, promote fair market competition, strengthen regulatory oversight and improve the collection of public revenues. With the introduction of the new fuel marking solution, the authorities expect greater control of the quality of fuel on the market and provide stronger protection for citizens and legitimate businesses.

Kevin McKenna, president and CEO of Authentix commented, "We look forward to the implementation of this new fuel marking program in Bosnia and Herzegovina and all of the benefits the government and citizens will realize from this important decision made to protect the fuel supply from illicit trade."

Authentix has a proven track record of delivering successful fuel integrity programs throughout the region. Together with its consortium partners SGS and Nanoinspekt, d.o.o., Authentix has served as the exclusive provider of fuel marking technology for the Republic of Serbia since the program's implementation in 2013. During that period, the Serbian government has reported significant growth in fuel tax revenues and a substantial reduction in illicit fuel trade.

Elsewhere in the region, Authentix was recently notified it has also been selected as the exclusive provider of fuel marker technology for a newly approved fuel marking program in Montenegro, with that contract expected to be executed in the next 60 days.

With dozens of fuel marking contracts around the world, including North America, Central America, South America, Africa, and Europe, more governments and commercial companies rely on Authentix's technology to protect their fuel supply chains, enhance regulatory compliance, and safeguard public revenues. For over 25 years, Authentix has provided covert fuel marking technologies protecting over 3 trillion Liters of fuel across six continents supporting efforts to reduce fraud, deter smuggling, and strengthen market integrity.

About Authentix: As the authority in authentication solutions, Authentix brings traceability to today's complex global supply chains. For over 25 years, Authentix has provided clients with physical and software-enabled solutions to detect, mitigate, and prevent illicit trading activity for currency, excise taxable goods, and branded consumer products. Headquartered in Addison, Texas USA, Authentix, Inc. has operations in five continents serving clients worldwide.
